

Barral Institute Case Study

Visceral Manipulation - Left Sided Headaches

Alison Harvey, DC

Patient Age / Gender

Female age 17

Patient Symptoms

Left sided headaches and shoulder pain on left. Also, generally feeling unwell and nausea. Incidental diagnosis - coarctation of aorta.

Evaluation / Treatment

Two treatments (due to travel schedule). Evaluation led to right femoral artery. It felt like there was a pull from there right to her neck area. Released the vascular system in first session.

Outcome

By second session, no more headaches, nausea, much more energy and some improvement of shoulder pain.
